D. Many hands make light work

## 二、完形填空。

11. Can plants keep alive for more than 60 years when being sealed up(被密封)in a glass bottle?The answer is YES, which may sound(1) \_\_\_\_\_. What David Latimer did will throw light on this question. He has a garden sealed inside a huge glass bottle. He has only opened it once since he started it over 60 years ago.

In 1960, when the bottle garden was popular, David also had a great interest in it. He decided to(2) \_\_\_\_\_ a bottle garden. After putting some compost(混合肥料) and water, which are(3) \_\_\_\_\_ for plants to grow, into the 10 - gallon bottle, he put a young plant into it. David wondered what would happen if he sealed it up. So he did like that and put it near a sunny window(4) \_\_\_\_\_ light to enter through the glass.

The bottle garden soon made an ecosystem(生态系统)of(5) \_\_\_\_\_ own through the magic of the sun just like what plants do in nature. In 1972 David did open the bottle to water the plant. But then it was kept sealed(6) \_\_\_\_\_ fresh water or air. It may seem strange that the plants(7) \_\_\_\_\_ to grow, but it's not - the garden is a self - sufficient(自给自足的)ecosystem. It's a(8) \_\_\_\_\_ example of how nature can provide everything necessary for itself to live. The bottle just(9) \_\_\_\_\_ in the way that the earth does as a whole. How amazing the bottle garden is!

David plans to(10) \_\_\_\_\_ the bottle garden to his children after he passes away. If they don't want it, the mini - ecosystem will go to the Royal Horticultural Society.

### 三、阅读理解。

12. Imagine that a girl sits down for a test in a future classroom. Her exam paper is made by an artificial intelligence(AI)(人工智能)model based on her own learning. When she finishes her paper, she hands her paper to her teacher, who uses another AI model to grade the paper. Based on the result, a new learning plan is made for the student according to her strengths(优势)and weaknesses. This is personalized(个性化的)education at its best.

Could this be the future of AI in education?It is certainly possible. With the development of high technology, the dream about the AI classroom will come true even faster than we expected.

However, it also puts a question:How can AI help students improve their schoolwork?

AI can use past information to make personalized learning plans according to students' performances. The plans allow students to learn at their own speed and in their own way. AI can easily catch expressions(表情)on students' faces. When students get into trouble, AI models can make a mark. Even before they start to show signs of trouble, AI models can make correct predictions(预测). At the same time, AI models can provide ways of dealing with problems and improving learning plans quickly.

What's more, AI can provide the special program for those who have problems in learning. One example of a company developing AI to improve the learning experience is Nuance. It offered Dragon Speech Recognition technology. With the support of voice recognition(识别), AI allows students to complete tasks only by speaking. This offers a chance to those who have problems in writing. AI will become more and more important in education. In the near future, we will see an AI classroom. It can not only provide personalized learning plans but also use technology to predict results. Education will be personalized to a student's strengths, bringing a more enjoyable learning experience for all students.

- (1) What is the purpose of Paragraph 1?
  - A. To make students more worried about tests.
  - B. To explain why learning plans are necessary.
  - C. To introduce personalized education to readers.
  - D. To show students how meaningful the AI model is.
- (2) From Paragraph 4, we can learn AI models can \_\_\_\_\_.
  - A. make good use of learning plans
  - B. describe different kinds of expressions
  - C. mark and predict trouble by expressions
  - D. keep students away from the possible problems
- (3) What is the example of Nuance used to show?
  - A. AI can improve students' writing skills.
  - B. AI can offer the service to special students.
  - C. Students can easily complete tasks with AI.
  - D. Voice recognition makes a difference to education.
- (4) What can be inferred(推断)from the passage?
  - A. AI will work instead of teachers in the future.
  - B. It will take a long time to build AI classrooms.
  - C. AI will be widely used soon in top universities.
